

A quick way to create a Power Bi Dashboard documentation Confluence page.

Automate the process of generating documentation for the Power BI dashboard.

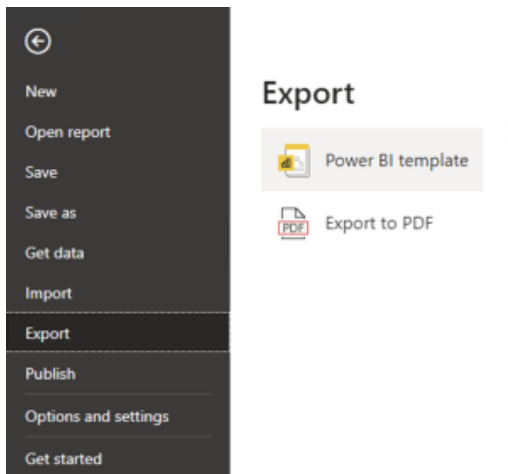

All we need is Power Bi Desktop and Python.

Step by step:

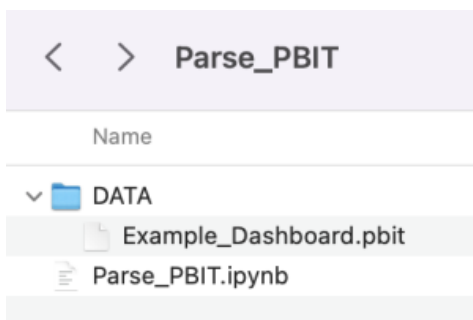

1. Go to "File" in Power Bi Desktop;

2. Export Power BI template;

3. In the folder where the python script is stored - create a folder "DATA" and add Power BI template in there;

4. Use script;

Change the file name

```
# Set file Name
str_file_name = 'Example_Dashboard.pbix'
```

5. Result in "wik_page.xml" file;

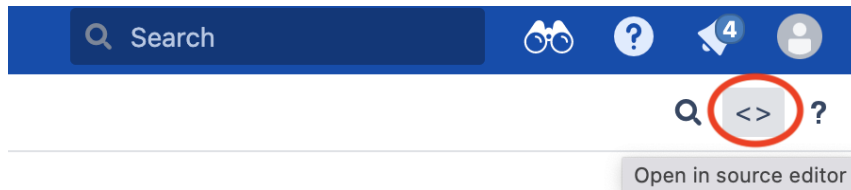

6. Create a page in Confluence and publish;

Draft page |

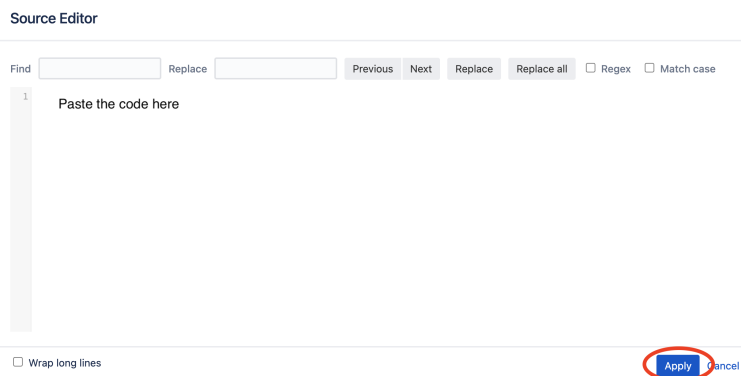

Changes saved **Publish** Close ...

7. Click "Edit" on the newly published page;

8. Open is source editor;

9. Insert text from "wik_page.xml";

10. Done!
